Hi,

I have an application, which consists from main exe and several dll.
if I install it with the setup kit I made from VS, all works ok
But I need to share the folder it was installed into, and launch the application on other computers, from the shared drive
However, when I launch it, it generate a security error.
The app launch a main form which contains, among few other controls,
a
web browser
The startup method starts as below:

```
[STAThread]
static void Main(string[] args)
{
    Application.EnableVisualStyles();
    Application.SetCompatibleTextRenderingDefault(false);
    MainForm mainForm = new MainForm();
    //.....
```

And the constructor of main form is

```
public MainDesktopForm()
{
    InitializeComponent();
    ApplyUICulture();
    webBrowser.StatusTextChanged += new
    EventHandler(webBrowser_StatusTextChanged);
    this.splitContainer1.Panel2Collapsed = true;
    this.Handler.Visible = false;
}
```

The error generated can be seen at <http://amssoft.dyndns.org:8090/public/error1.JPG>

Security error when running app from shared drive – please help!!!

I changed the code, to create MainForm later (after some startup code)

and now my startup looks like

```
[STAThread]
```

```
static void Main(string[] args)
```

```
{
```

```
Application.EnableVisualStyles();
```

```
Application.SetCompatibleTextRenderingDefault(false);
```

```
try
```

```
{
```

```
Thread.CurrentThread.CurrentCulture = new
```

```
CultureInfo("nl-NL");
```

```
//...
```

Now the error is caused by this statement, and the error can be seen

<http://amssoft.dyndns.org:8090/public/error1.JPG>

Please help.

Thank you

.
