I am trying to develop MMC 3.0 snap-in with Visual Studio 2003. I didn't find whether MMC 3.0 supports VS2003 and .NET 1.1 in MSDN documentation. I know MMC 3.0 SDK sample codes are all built with VS2005.

I installed MMC 3.0 on Windows XP Professional SP 2, which only has .NET framework 1.1. I checked the microsoft.managementconsole.dll installed to c:\WINDOWS\system32. It is .NET 2.0 assembly. Does it make sense? I thought .NET 2.0 assembly cannot run on .NET 1.1 framework.

Please help

.
