

RE: Determining user rights to a folder

However, if you want to know whether a given account has the permission, I think you still need to do further programming to compare the account with those queried security identifiers. Maybe you can use ADSI or other queries to get all the groups of a certain user and compare with the ACL list.

Hope this helps.

Sincerely,

Steven Cheng

Note: The MSDN Managed Newsgroup support offering is for non-urgent issues where an initial response from the community or a Microsoft Support Engineer within 1 business day is acceptable. Please note that each follow up response may take approximately 2 business days as the support professional working with you may need further investigation to reach the most efficient resolution. The offering is not appropriate for situations that require urgent, real-time or phone-based interactions or complex project analysis and dump analysis issues. Issues of this nature are best handled working with a dedicated Microsoft Support Engineer by contacting Microsoft Customer Support Services (CSS) at <http://msdn.microsoft.com/subscriptions/support/default.aspx>.

What's the best way in .Net (C#) to verify if an specific user has write access to a folder?

Any code snippet is appreciated.
