I have a webform that I would like to use the autocomplete feature for all my textboxes. My textboxes are the <ASP:Textbox /> control. The only way I seem to be able to get autocomplete to work on the text boxes is to have an <INPUT type="submit"> control on my web page and then, after filling in a textbox to have the user hit ENTER (not TAB or clicking out of the box). They then have to tab to the next box, or click over. Of course, the page then gets posted once the validation rules are meet.

Is there anyway I can get this autocomplete feature to work without having the user hit ENTER (and then TAB) after filling in each box?

Thank you for your help!
