Toby,

You will have to define the IDiskQuotaControl interface in your code, using the attributes from the System.Runtime.InteropServices namespace. Once you have this, you can get the type of the COM component from a call to the static GetTypeFromCLSID method on the Type class. With that, you can pass the type to the static CreateInstance method on the Activator class, and cast the return type to the IDiskQuotaControl interface you declared in code.

Hope this helps.
