Hi,

When I read from a XML Document and assign –

```
DataSet.ReadXml(@"C:\Abc.Xml",XmlReadMode.Auto);
DataGrid.DataSource = DataSet;
```

I get the DataGrid filled, but the data is not filled in the datagrid. It shows Table Name as a link, on clicking of which the grid is filled. Even the DataGrid.Expand(-1) do not expand the rows.

Is there any way for this?

Thanks

Thejus
