What did you try? A PUT? A POST?

Does the ASP.NET process have write permission for

C:\public\tempFiles\work\docs?

microsoft.public.dotnet.languages.csharp: Re: HttpWebRequest file upload problem

Because of security? It's not a good idea to allow exposed services like a web server or an application server to do everything on your production server.

> *Whenever I try uploading files from my computer to any forum*

What has this to do with shared folders on your system? All you need is to understand the security implications and configure your system accordingly.

Cheers,
