In all honestly, I would've asked before I even entertained the idea of accepting the position – got the job description, duties and responsibilities. Hind site being 20/20, now you've got no recourse except to accept what the employer decides, which may be "nothing", since you didn't inquire about it before accepting. Now you have "no" bargaining power, and to find out "if" you are even going to get an increase, you'll need to be savvy, like ask for all the details on the new position, its responsibilities, who reports to you, who you report to, how the position fits into the company structure, how many hours are you required to work (as many supervisory positions now carry the extra unmentioned 20 hours of supervisor work on top of the 40 hours development/coding work), what is its rate of pay, etc.
