Thanks, that definitely got me going in the right direction. I am trying to build the "COM Interop Part 2 Sample" from:

<http://msdn.microsoft.com/library/en-us/csref/html/vcwlkcominteroppart2cservertutorial.asp>

Actually, building it and registering it with regasm works fine. I can add a reference to this COM server in the VB 6.0 IDE. From the VB Object Browser I can see the PrintHi() method in the IManagedInterface class. But this line of VB 6.0 code:

```
Set myObj = New CSharpServer.InterfaceImplementation
```

gets this error message during the VB compile:

"Run-time error 80070002. File or assembly name CSharpServer, or one of its dependencies was not found."

Surely I am almost there. What's the last step?

Craig
