Hello,

I am trying to copy a file from one domain to another. I have the username and password of the destination domain. I tried a few approaches –

1. Using the Impersonator Class –

<http://www.codeproject.com/useritems/ZetaImpersonator.asp>

2. Using WebRequest object to write the file to the destination domain –

<http://www.dotnet247.com/247reference/messages/42/211482.aspx>

3.

<http://www.codebetter.com/blogs/brendan.tompkins/archive/2004/09/24/26730.aspx>

Mapping to a network drive will not work in this scenario because of design requirements.

The 1st 2 approaches gave me the same error – Access denied to MyFile.txt.

This is a console application and the 2 domains I am referring to are on the same internal network and not across the internet.

Could someone please give me a pointer to solve this problem? Any help with this will be appreciated!

Thanks,
–Divya
