Hopefully someone can help,

I have a listview box where I display my desired files. I single click on the desired file to be renamed and I rename it with a new name. My problem arises when the new name gets displayed through refreshing of my loop and display function. The problem is that when, if I rename the last file entry, everything appears to display fine. If I rename a file above the last entry (bottom entry), two of the new file names appear and the last file entry gets pushed out of the listview or disappears. After renaming, with in my folder where the files reside, the file names are exactly as they should be and the rename files are displaying the new names. The problem is just within the displaying them.

Following is a sample of my code:

```
-----  
private void lvIndivFileConversion_AfterLabelEdit(object sender,  
System.Windows.Forms.LabelEditEventArgs e)  
{  
try  
{  
File.Move(Path.Combine(currentFolderPath,  
this.lvIndivFileConversion.FocusedItem.Text),  
Path.Combine(currentFolderPath, e.Label.ToString()));  
DisplayInfo(currentFolderPath);  
}  
catch  
{  
}  
}  
-----
```

I am coding in C#. Any and all help is appreciated

MikeY
