If you mean from VB.NET to C#, I've had success with InstantC#:

<http://www.tangiblesoftware.com/>

Disclaimer: I have a free copy which was generously given to me for some reason (generally posting a lot, or something like that :)
However, I'm not in the habit of saying something works when it doesn't!

I haven't used it a lot, but the projects I **have** converted have been fine (after a little tweaking which I'd expect anyway).
