Thank u for giving reply to me.

Hi Me

My requirement is in browser i want to type www.amazon.com so,some data is passing through the server.In the mean time i want to check this data the passing data is valid data or not i want check it.

This is my requirement.

So,i have decided to create one proxyserver,This behaves like hook between target server and client machine.

your question is which protocol is used in this server?HTTP

Please help me the structure of the proxyserver for HTTP protocol?

How can i implement this task in c#.net?

What assemblies are supported in c#.net?

Kindly suggest me.

Thanks in advance

TulasiKumar
