Hi all  
someone kows where to find a siple project where undestand how typed  
dataset works.

thaks all and excuseme for the stupid questin but i'm a beginner!

Create a simple one and look at the generated code (There is an icon at the  
top of solution explorer that will show the generated .cs file) It is just a  
wrapper around a dataset that does the casting and hides the use of strings.
