| Hello,
| I am writing code, which will copy webServices from one IIS 6.0
| webserver to another and using DirentoryServices to achieve this
| purpose. And I have problems with authentication – I get an error
| whenever I try to read properties of DirectoryEntry object. I had same
| problems when I was using WMI, but there setting
| ConnectionOptions co = new ConnectionOptions();
| co.Authentication = AuthenticationLevel.PacketPrivacy;
| solved the problem.
| So perhaps a question would be – how can I set AuthenticationLevel to
| PacketPrivacy, when I am using DirectoryServices?
|

Check the AuthenticationTypes enum in System.DirectoryServices. If you are
binding to the IIS metadata you need at least
AuthenticationTypes.Encryption.

Willy.
