

How to bind a DataSet to a ReportViewer object?

-

I use DataSet which I get from Web Service and it doesn't maintain an active connection to the database. So that I can't populate table in Report.rdlc dragging fields from the DataSets window to the some rows in the table. I want to display DataTable from the DataSet via the new ReportViewer. I tried something like this, but it doesn't work.

```
reportViewer2.ProcessingMode = ProcessingMode.Local;
reportViewer2.LocalReport.ReportPath = "Report1.rdlc";
reportViewer2.LocalReport.DataSources.Add(new ReportDataSource("DOH",
GetData2(inputFile))); //GetData2(inputFile) returns the datatable
reportViewer2.RefreshReport();
```

Am I missing something?
