Scott wrote:

Hi everyone,

I have a c# console app that when run through an autorun.inf file, launches a web page from the CD. It works just fine but I would like the console window minimized on startup. Currently, the console window displays briefly, the web page loads, and the console window disappears.

The only line of code currently in the console app is...  
`System.Diagnostics.Process.Start("blahblahblah.htm")`

Any suggestions?

Don't know if this will work offhand, but couldn't you just have a GUI app that doesn't create a form? It just does the Start() then returns.

Thanks,  
Scott
