No, did not work even if I publish locally.

Thanks

Hello arkgroup,

As I understand that behaviour is only when u run your app from network share?
and localy it works fine?!

a> directory.
What does it mean?

- a> I read value and display on the form for testing.
- a> Then I change value in config file, restart application and
expect
new
a> value to show.
- a> But old value still showing. What is wrong?
Wrong is that data read from the other config :)
