Hi all

I am new(ish) to c# and was wondering if anyone would help me?

I want to create an application that polls a specific directory all the time and when it finds an XML file has been placed in the directory, it reads the XML file and deletes the file from that directory.

Am wondering what would be the best (most efficient) way of doing this?
e.g. a thread, timing event???

If anyone knew of any examples of anything like this which i could use a starting point i would really appreciate it.

Thanks In Advance

Adam
