Make sure your not using MDX 2.0 libraries. I have now converted my code back to 1.1 after the time bomb microsoft so kindly put in it. It caused issues like that for me, where my comp ran fine others didnt.

Other people are having problems running a program I wrote in C#. I would debug the thing myself to identify the problem, but I'm not getting any error on my end, so I'm not sure what's causing it. If anyone immediately recognizes this kind of error, PLEASE tell me what's causing it.

This is the error report they're getting:

EventType : clr20r3 P1 : squest.exe P2 : 1.0.0.0 P3 :

Re:

Re:

45b3ef04

P4 : microsoft.directx.direct3d P5 : 1.0.2902.0 P6 : 42056de2

P7 : 67c P8 : ee P9 : y2ffarvpivtdkhjuaplqt5yzl3rahrxi

I made sure to have them download the .NET framework and the latest version of DirectX. At first I thought the program might not be able to find some of the files (.txt documents and images) for whatever reason, but those throw different error messages.

Again, I realize that this isn't a whole lot of information, but it's all I really know about the problem myself, and I can't even identify a pattern in all the PCs the program doesn't work on. The only other thing I know is that the error message occurs as soon as the .exe file is run (before the window even pops up).

If anyone recognizes this problem from somewhere else or otherwise has an idea on how to figure out what's wrong, please tell me.
