hi Martin,

Martin wrote:

Does anyone know if it is possible to use the
smo db.Create() method to
create a new sql server database with sql
server 2005 express? The
debugger complains that remote operations
are not allowed with the
default install of sql server express.

That is correct, you have to enable it first using the Surface
tool.

Thanks Stefan

I've tried the surface area configuration tool, but the database engine
settings pages states sql server express version can only be run in local
mode. Is there another surface tool I'm not aware of?

I'm only trying to use smo with my databases on my local c disk, so I'm

Re: smo create database object

not sure why smo needs remote connectivity to do this?

Martin

It considers anything outside the database to be a remote connection.

When you run the Surface Area Configuration, and you go into Services and Connections, and click on your database, does it show a line for "Remote Connections" ? Set it to accept local and remote connections.

Robin S.

Thank you Robin

Yes it does show a 'remote connections' line but enabling this option didn't work. I'll try re-installing the express version and selecting the 'mixed mode' option to see if that helps.

Cheers, Martin
