Hello All,

I have been trying to figure out how to set the BackColor of individual cells in a DataGridView. I found the following solution in a VB usenet group

```
DataGridView1.Item(ColumnIndex, RowIndex).Style.BackColor = Color  
DataGridView1.Item(ColumnIndex, RowIndex).Style.ForeColor = Color
```

or

```
DataGridView1.CurrentCell.Style.BackColor = Color  
DataGridView1.CurrentCell.Style.ForeColor = Color
```

I figured I could just change the () to [] and it would work in C#. However, the DataGridView does not seem to have an Item property. How can I accomplish this using C#?

Thanks,

Paul
