thanks bunch.

in fact, i tried it and it compiled and ran fine. however, the problem is that res is null after making a call to getSearch() (which is a web service) and i was not sure if i was doing it wrong or it is just supposed to be null.

Well, to check whether that kind of thing is valid or not, I'd suggest trying it in a simpler environment first.

btw, if i were to loop through this array, is it the correct syntax?

```
foreach (myresult x in res)
{
}
```

Yes.
