Thanks for your reply Allan,

Yes, if you manually do the text-binary encoding/decoding in .net code and store raw binary stream in SQL Server, it will certainly work. I'm still interested in why your original text type column not work. What's the datatype of that column, nchar or nvarchar?

Anyway, if meet further problem later or still have interests to make text column work, welcome to continue discuss here.

Sincerely,

Steven Cheng
