Linda,

It's a WinForm application. And the "Tag" control is a user control within my project.

Picture a 9 x9 grid of squares (I called them tags). Each square has a small 3x3 grid of mini tags within it.

I'm using 3 types of user controls to create each "tag". A "minitag", a "minitagpanel" which is made up of 9 minitags. And a "tag" which contains a minitagpanel. Then I add 81 "tags" to the controls collection of the panel on the form. There's also some custom graphics getting drawn on the panel behind the user controls.

I guess I just need to know the best way to handle the drawing, etc. because it's all really slow.

I can send you the project if this is not enough info.

Hi,

I am sorry that I could not understand your scenario exactly.

What's the kind of your application, a WinForms or Web application?

I have a user control (tag) made up up 9 smaller user controls (minitag).

I have a panel on a form that is being populated with 81 of the tag controls in a grid configuration.

What's the "tag controls" in the above sentence?

Re: SuspendLayout Not Suspending...

If possible, could you please send me a sample project that could just demonstrate your problem? To get my actual email address, remove 'online' from my displayed email address.

Only if I understand your problem exactly, I may provide possible assistance to you.

Thank you for your understanding and cooperation!

Sincerely,
Linda Liu
