You should use the new DataGridView in 2..0. There is a property called SelectedRows which return a collection.

"frostbb" <[barry.b.frost@xx](mailto:barry.b.frost@xx)> wrote in message [news:uqGxQWPkHHA.4112@xxxxxxxxxxxxxxxxxxxxxxxxxxxx](mailto:news:uqGxQWPkHHA.4112@xxxxxxxxxxxxxxxxxxxxxxxxxxxx)

The following code works great in C# Net 1.0 & Net 1.1 apps ... doesn't work for Net 2.0 apps.

Cannot get pDg.IsSelected(i) to toggle to 'true' for 'highlighted' rows in a DataGrid control.

```
private int CountSelectedDataGridRows(DataGrid pDg)
{
    int i = 0;
    int iSelectedRowCount = 0;

    CurrencyManager cm =
    (CurrencyManager)this.BindingContext[pDg.DataSource, pDg.DataMember];
    DataView dv = (DataView)cm.List;

    for (i = 0; i < dv.Count; ++i)
    {
        if ( pDg.IsSelected(i) )
        {
            ++iSelectedRowCount;
        }
    }

    return iSelectedRowCount;
}
```

Any help would be greatly appreciated. We are MSDN Universal subscribers. Does MS still monitor this group?

Thanks in advance.
