Dear All

I have a very urgent requirement if somebody can help!!!!!!!!!!!!!!!!!!!!!!

i have a requirement to upload a file through a remote web page. Speaking more clearly i have a excel addin that will pick some values from the cells and create a text file, after that using a web page url it will try to uplaod that text file. The Webpage consists of a File control and a Button to Import. Now the above process will be silent and will be not visible to the user. I have tried with the querystring using the POST meathod of httpWebRequest, but the querystring does not provide any facility to specify the file location.

Kindly help  
Thanx  
shantanu
