I think we're way into the realms of deep, dark magic at this point though...

No, just in the realm of undocumented keywords. Trying to push these can easily cause compiler crashes, since they're presumably not stress- or regression-tested (or, dare I say it, tested at all). As long as it works for the cases the MS guys needed them for, I don't think they particularly care either.

Hmm... I'm not sure about that. I suspect they'd rather know. Alun, have you raised a bug?
