```
'msgs' is empty. There is two possiblities here.  
1) from el in root.Descendants("Message")  
where el.Element("MessageID").Value == MsgID  
select el;  
This LINQ statement is not working.
```

Right. What happens if you remove the where clause? Is it successfully finding the messages themselves when unfiltered? That would also verify that it's managed to load the document appropriately.

```
2) After the LINQ found the records, it fail to copy the value to  
IEnumerable<XElement> msgs
```

That's just assignment – pretty unlikely to fail.

As I said, I have tested this code and same LINQ statement on a desktop console application. It works fine.

Sure. The trick is narrowing down where the difference is :)
