Hello:

I have been looking for a tool similar to Lex and Yacc for C#. I would like to be able to generate grammars so I can write a simple interpreter for another piece of code. However, I have to make many future grammars and was hoping to find a tool that would allow me to generate as many as I would like.

I was hoping someone had made a port for C#. I haven't had any luck looking for one, so any direction would be appreciated.

Thanks a lot,
Travis
