

What is that question (?) sign after a type declaration?

What is that question (?) sign after a type declaration?

I have been noticing declarations like this:

```
private DateTime? _creationdate;
```

and have been wondering what is the function or meaning of that question sign after the member type name. I searched the web but naturally with such a thing in a query yields a lot of noise and no suitable results.

Can somebody enlighten me?

Cheers,
Emilio
