I have overridden the DrawColumnHeader, DrawItem, DrawSubItem methods as displayed below.

It is drawing the icon correctly, however, when I click on a row, the middle column, eg. column 1

is not being shown as selected. All other columns look selected whenever I click on a row.

Can somebody please help with having the selected row displayed correctly?

I don't see anything in the code you posted that would render a selected cell differently than an unselected one. What makes you think that the selection should be represented while you are using the code that you posted?

Pete

p.s. Please don't post HTML.
