Hello. How can I test on the client side that an element has been selected in a asp:ListBox, and inhibit the sending to the server if not? I have tried:

```
<script language="javascript" type="text/javascript">
function Validation() {
alert(document.YFRLDD0011.lstSite.SelectedIndex);
if (document.YFRLDD0011.lstSite.SelectedIndex = -1) {
alert("Veuillez choisir un site.");
return false;
}
return true;
}
</script>
```

....

```
<form id="YFRLDD0011" runat="server" onsubmit="Validation()">
<asp:ListBox ID="lstSite" runat="server" DataSourceID="ds"
DataTextField="SyNomPaysSite"
DataValueField="AnnNumSite" Rows="30"></asp:ListBox>
but alert(document.YFRLDD0011.lstSite.SelectedIndex) always returns
"Undefined".
```

Thank you. Gilbert.

.
