> About Doc-O-Matic
>
> Doc-O-Matic creates fully cross linked documentation systems,
> including Source Code Documentation, Online Help and User Manuals in
> PDF, HTML, HTML Help 1.x, Help 2.0, Windows Help and RTF. Using
> Doc-O-Matic you can create every kind of documentation from a single
> source.
>
> Doc-O-Matic uses information about source code symbols (namespaces,
> packages, classes, members structs, records, enums, and other
> symbols) and existing tagged and untagged comments (XMLDoc comments,
> JavaDoc comments and plain text comments) in source code files and
> external documentation files (Word Documents, HTML files and plain
> text files).
>
> Doc-O-Matic creates accurate documentation based on popular IDE
> documentation styles (VS.NET, MSDN, VCL), including class
> hierarchies, symbol overview pages, examples, syntax highlighted
> declaration and function body sources.
>
> Doc-O-Matic provides full automatic hyperlinking in your project,
> between different projects and from projects into the Framework SDK,
> MSDN, VCL and other existing documentation.
>
> The fully featured integrated editor makes it easy to document your
> source code and author your Help systems.
>
> Doc-O-Matic includes a visual table of contents designer that allows
> you to rearrange source code symbols and topics. Generated
> documentation can be automatically compiled into HTML Help 1.x,
> Help 2.0, Windows Help, browser-based Help or transformed into a
> double-side printable PDF document. All output formats allow full
> customization of page layout, index and table of contents.
