Hi Tom, not sure if this will help but if you don't have to use shell you could use:

```
System.Diagnostics.Process.Start("Your.pdf")
```

And that will launch the pdf you specified in the default application (Adobe Acrobat Reader).

Regards, Synthanator

I need to start Acrobat reader and load the file guide.pdf
The following code will start the program but how do I get
it to load my document guide.pdf?

```
Shell("C:\Program Files\Adobe\Acrobat 6.0\Reader\AcRord32.exe ")
```

The code above I spell out where Acrobat reader is, I there a way to find it
and load my file from a application path?
