Hi Haim,

First of all, I would like to confirm my understanding of your issue.

>*From your description, I understand that you want to get notification when a socket is closed.*

Have I fully understood you? If there is anything I misunderstood, please feel free to let me know.

I think there is no event fired when the remote point dropped the connection. In the most scenerio, the event is not necessary. Asynchronous model for socket gives same ability as the event model.

You may take a look at the link below.
