I can't answer your first question in any detail – I've got XP Pro – but I know that IIS doesn't run/come with XP Home. Have a search in this newsgroup – I've seen links to the "How to fix VB.NET resource kit installation problems" a few times in here.

The second question is easy – yes. They install side by side with no problems at all. Just make sure you install the .NET Framework v2.0 beta first.

Happy learning :D
