I need a  
Directory.GetFileSystemEntries  
where the search pattern is \*.dll;\*.exe

That is find all the \*.dll and all the \*.exe files  
I think Directory.GetFileSystemEntries search pattern can not contain more  
than 1 pattern. Correct?  
Is there a simple way to accomplish that.  
I know I can code it but wonder if there isn't a built-in method.

Thanks
