I don't know if you found an answer or not – but this is it:

[http://www.error-bank.com/microsoft.public.dotnet.framework.windowsforms/66601\\_Thread.aspx](http://www.error-bank.com/microsoft.public.dotnet.framework.windowsforms/66601_Thread.aspx)

Executive summary:

The handle isn't initialized, so something like the following put before your code will solve the problem:

```
Dim x as System.IntPtr  
x = Me.ProductList.Handle
```

( I actually do C# programming, I think the above should work in VB ).
