If you use the .Clone method then both arraylists will still point to the same objects. HTH

That is not true. 'Clone' will create a shallow copy of the arraylist:

```
\\\  
Dim a1 As New ArrayList  
Dim a2 As ArrayList = a1.Clone()  
MsgBox(CStr(a1 Is a2))  
///
```

```
--  
M S Herfried K. Wagner  
M V P <URL:http://dotnet.mvps.org/>  
V B <URL:http://classicvb.org/petition/>  
.
```
