John,

The documentation for Control.Hide states "Hiding the control is equivalent to setting the Visible property to false", while Control.Show states "Showing the control is equivalent to setting the Visible property to true".

<http://msdn.microsoft.com/library/default.asp?url=/library/en-us/cpref/html/frlrfssystemwindowsformscontrolclasshide>

<http://msdn.microsoft.com/library/default.asp?url=/library/en-us/cpref/html/frlrfssystemwindowsformscontrolclassshow>

I don't see where any more "evidence" is needed! ;-) Although as Herfried suggests, you could use ILDASM or Reflector to see specifically what the above remarks mean...

Hope this helps  
Jay

| Thanks Herfried. I had a hunch that was the case, but found no  
| evidense when googleing it.
