Hi,

I have an application that enables the user to switch between (so far) 2 different languages.

Now I need to display a datetimepicker. How can I switch / control the language the datetimepicker appears?

I tried doing this to set it to english, but it would still display the control using the german language:

```
System.Threading.Thread.CurrentThread.CurrentUICulture =  
System.Globalization.CultureInfo.GetCultureInfo("en-GB")
```

Thank you very much,

Josef
