I'm writing a Console Application and I would like to start it only if I pass to it a param:

```
myapp.exe -s --> start
myapp.exe --> I write usage reference
```

```
Public Shared Function Main( ByVal args As String() ) As Integer
If args.Length = 0 Then
' Display Usage
Return 1
End If
' rest of code
End Function
```

HTH,  
Phill W.
