Hi,

You should be able to get started with this, at least...

```
^\[d-]*\+?\[d-]*$
```

Hope that helps.

Dave

Hi,

I have a different requirement and it is :

I need to validate a phone number field.
It may or may not be a US phone number.

The constraints are :

- # It should accept any number of numbers
- # any number of - hyphens
- # and one + symbol
- # no other characters and alphabets are allowed

Thanks in advance
