Hi,

I've got listbox in my .aspx page where the users can make multiple selection.

So, Users can select any number of items in listbox, I have to take value from items and pass it to stored procedure to extract a dataset back.

- 1.What should i do while passing the multiple selected values?
- 2.Can i use 'in' clause in SQL procedure like

eg:Select a.xxx from a where a.yyy in @y

@y is the multiple selected values from listbox.

- 3.How to concatenate and send to SQL Procedure.

Please help me

.
