Hi,

AFAIK you can put anything into an ID3v2 tag.... In fact if you use the advanced tag editor built into WMP10 you can add pictures. I've added quite a few pictures to some MP3's and I'm sure they are a bigger filesize than a set of lyrics. Thats the whole point of the v2 tag though isn't it? to be boundless...

Nick.

Wolfgang Hüll wrote:

Hi.

The big difference here is, that mp3+g needs two different files (mp3 & bin).

I want the lyrics inside the mp3 tags => one file only...

Best regards,

Wolfgang.

AFAIK there isn't enough room inside the tags to place the entire lyrics in there.
