The following works fine for me:

```
mEmployeeAO.MainView.RowFilter = "EMP_Hiredate > #11/01/2006# AND  
EMP_HireDate < #11/30/2006#"
```

As does:

```
Dim d1 As Date = #11/1/2006#
```

```
Dim d2 As Date = #11/30/2006#
```

```
mEmployeeAO.MainView.RowFilter = "EMP_Hiredate > #" & d1.Date.ToString &  
"# AND EMP_HireDate < #" & d2.Date.ToString & "#"
```

Dear VB experts,

how can i set a rowfilter to a Dataview that filters the data from a
startdate to a enddate?

I tried this, but without success:

```
Me.CurDataViewStatistik.RowFilter = "DATEFIELD >= #" &  
Format(Me.dtpVon.Value, "yyyy\MM\dd") & "# AND DATEFIELD <= #" &  
Format(Me.dtpBis.Value, "yyyy\MM\dd") & "#"
```

The execution shows no errors, but the rowcount is 0.

Database is Access 2003 with .NET 2.0.

Thank you
Steffen
