First start to have a view what kind of controls are there in VB.Net

Mostly their is already a sufficient Control and than their are even more in so called powertools or sold by 3th part vendors.

For this you can have a look at the openfiledialog

[http://msdn2.microsoft.com/en-us/library/system.windows.forms.openfiledialog\(VS.80\).aspx](http://msdn2.microsoft.com/en-us/library/system.windows.forms.openfiledialog(VS.80).aspx)

I hope this helps,

Cor

I have only slightly tried to learn VB, and have been trying to do something vith VB.net.

I am sure it is simple to some (probably most), but please bear with me.

I want to creat a form with various buttons. each button will load a file on the same CD that the exe file is on.
nothing fancy, just launch some .doc, .xls and PDF files.
second issue, I want to be able to load these files regarless of the CD drive letter the user may have assigned to the drive.

I am just trying to learn some simple stuff, and am at a complete loss.

If someone has the time to walk me through the process, I would appreciate it.

Thank you for your help
