I thought you said you have plenty of VB6.0 work, and that's why you've not been around as much, it's because you've been so busy doing your VB6.0 work that's just overflowing your inbox. So which is it? You can't have it both ways. You can't say they killed your programming career in one thread while saying you have more work than you can do in VB6 someplace else. Or am I confusing you with MP? If I am, maybe he could throw some work your way.

notice the differentiation between 'programming' and 'database'

they killed my programming career-- it was the worlds' most popular programming language.. and now it's just GONE.

and I for one; have the BALLS to stand up for the users of the worlds' most popular programming language.

If they're going to change VB every other year for the next 10 years;  
I  
just dont know if I see the point.

They already changed it fom VB6 to VB.net 2002 to VB.net 2003 to VB 2005.

they change the programming name THREE TIMES IN FIVE YEARS?  
someone somewhere needs to stop coming up with corny cheesy monikers;  
stop RENAMING NEWSGROUPS EVERY RELEASE -- I AM IN A NEWSGROUP NAMED  
DOTNET TALKING ABOUT A LANGUAGE THAT ISNT CALLED DOTNET? WTF-  
LIKE  
SERIOUSLY?

they screwed over the programmers of the world; I can literally coast by on my database skills and never have to write another line of code

Re: Clear command window?

in my life

I've got bigger fish to fry-- like Olap for example. Screw Programming.  
I'll just use PHP against XMLA web services and everyone will be happy.

I thought you said you get 8-10 job offers a week. So how is that a destroyed career?

it's the single feature I wish that VB6 had.

I'll use my dirty mouth where I want.

MS Killed the world's popular language; they personally destroyed my programming career.

I could give a shit.  
I'll still use VB until they make VB10 and it will be 100% backwards compatible with VB.com

Re: Clear command window?

yeah this is probably the  
ONE FEATURE THAT  
WAS MISSING IN VB6;  
AND  
THEY  
COULDN'T AFFORD TO  
FIX IT IN THREE NEW  
VERSIONS OF VISUAL  
STUDIO?

eat a dick, microsoft

Wow. That  
looks very  
promising.

I assigned a  
shortcut key  
to it, but  
when I tried  
it during  
runtime, it  
didn't  
execute.

It seems to  
work only  
during  
design time.

Thanks.  
That's good  
stuff to  
know.

Re: Clear command window?

Edit.ClearAll  
is  
the  
command  
to  
use.  
You  
can  
bind  
this  
command  
to  
a  
keyboard  
shortcut  
by  
going  
to  
Tools->Options->Environment->Keyboard  
and  
type  
in  
the  
'Show  
commands  
containing:'  
textbox:  
'Edit.ClearAll'  
w/o  
the  
quotes.  
Select  
the  
command  
and  
in  
the  
'Press  
shortcut  
key(s)'  
box,

press

the  
keyboard  
shortcut  
you  
wish  
to  
associate

Re: Clear command window?

with  
clearing  
the  
window...click  
Ok,  
and  
try  
it  
out  
:)

Please  
note,  
this  
command  
is  
available  
in  
.Net  
2003,  
and  
I  
don't  
have  
2005  
installed  
to  
test.  
The  
instructions  
above  
are  
also  
for  
2003  
:(  
Even

though

this  
is  
for  
2003,  
it  
\*should\*  
still  
be  
available  
in

Re: Clear command window?

Re: Clear command window?

.Net  
2005...g'luck!

HTH,  
Mythran
