Yeah Robi thanx 4 ur concern..

My project is VB6. and tables,i mean database is in oracle.

So wat r the various methods by which i can connect a form of vb to the table there in oracle?

I mean i don't wanna open recordsets and write long queries.

Each field in the form should directly get it value form the table fields by itself.

So ,is that possible??

RobinS wrote:

You need to give more information. Is your project in VB6, VB.Net, or VB2005? Is your database Oracle? What kind of connectivity? Are you talking about a desktop app using the database for display and reporting and updates?

Hello every1

Can any1 tell me that What are teh various methods by which we can connect our

database in sql to our project's front end which is in VB ??

I wanna know the pros and cons of various types of Connectivities?
